INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement		
1. Statement			
Novelty (N)	Claims	1-10	YES
	Claims		NO
Inventive step (IS)	Claims	1-10	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-10	YES
	Claims		NO
2. Citations and explanations (Rule 70.7)			
1. Reference is made to the following documents:			
D1: WO 0044421			
D2: US 6258063.			
<u>Inventive step (PCT Article 33(3))</u>			
2. The present application appears to satisfy the requirements of PCT Article 33(1) since the subject matter of claims 1-11 appears to involve an inventive step (PCT Article 33(3)).			
Document D1, considered to be the prior art closest to the subject matter of claim 1, describes a needleless injection device (figures 1-3) comprising:			
- a body (20);			
- an actuating device (32);			
- a pyrotechnical generator (22) with a charge;			
- a container (24);			
- a combustion chamber (26) comprising two volumes;			
/...			

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

- a device (a wall separating the two volumes and the fragile wall of the ampoule 22) for regulating the two volumes.

The subject matter of claim 1 therefore differs from the known device in that:

- the device comprises an expandable membrane, which is initially folded, that forms an impervious wall between the combustion chamber and the container containing active ingredient, said membrane being designed to unfold when impinged upon by the gases emitted by the combustion of the pyrotechnical charge.

The problem addressed by the present invention can consequently be regarded as that of **preventing the combustion gases from polluting the active ingredient.**

Although document D2 describes a needleless injection device comprising an expandable membrane (figure 3, column 13, lines 7-23), said membrane is not the same as the membrane according to the invention since the membrane in document D2 is always under pressure whereas the membrane according to the invention is not subjected to constant pressure. In consequence, , it would not be possible to proceed from the membrane according to document D2 and arrive at a membrane of the claimed type.
